# Disruptive Innovation through the creation of alternative value software within the auditing profession

Developed for auditors by auditors

## About AuditEasy

AuditEasy is an assurance software platform developed for the use in execution of assurance engagements.

AuditEasy is the result of decades of experience in the assurance space culminating in the development of an alternative value software platform which allows professional audit firms to execute their assurance engagements with a higher degree of efficiency and precision resulting in increased productivity and ultimately a more cost-effective approach.

## The Benefits

- 1** Automation of time-consuming process such as:
  - Materiality calculations
  - Planning and concluding variance analysis
  - Sample sizes
  - Management letter automation
  - Management representation automation
- 2** Seamless integration with operating system which enforces user access control and allows permission limitations and parameters to be enforced throughout the engagement.
- 3** Live review enables the user to review various documents without having to open each document, thereby allowing for immediate access which increases review efficiency.
- 4** Successful automation and digitization lends itself to integration of various assurance aspects which results in a direct increase in productivity throughout the assignment and therefore higher internal margins against the backdrop of a more competitive software pricing solution
- 5** Navigation wizard which will seamlessly assist the user in with engagement setup, importing, mapping and other key engagement aspects which ensures a more productive process is followed for the remainder of the engagement.

## Our Competitive Advantage

- Efficient synchronisation as only modified documents are replicated and not entire file which requires less bandwidth and a lower quality network.
- Software interface which is easy to understand, navigate and operate no matter expertise of the specific user.
- Software which can easily be customized to incorporate your firm branding, regulatory requirements and operational conditions to cater for entity specific engagements.
- Audit Optimizer – A single template which using predetermined questions enables the user to seamlessly navigate between IFRS, IFRS for SME, IFRS for Group, IFRS for SME for Group or Less Complex Entity audits. The Optimizer furthermore automatically customizes the planning, execution and finalisation to cater for the specific needs of the engagement.
- Execution Optimizer – Through various questions the user is provided with only those working papers specific to his engagement, therefore staff no longer complete unnecessary working papers.

## About WareCentric

Ware Centric builds expertly integrated custom software solutions that enable your business to grow and scale. We solve custom software development problems for all business sizes ranging from small to large. We specialise in custom software development. Custom software development is the process of designing software applications that meet the specific needs of your business. Our customised solutions can be more efficient and flexible for your business needs. Custom software can positively affect your business in the long run with growth and expansion. Custom software development is a long-term investment that always pays off in the end
